

Interhemispheric Atlantic seesaw response during the last deglaciation

Submitted by Emmanuel Lemoine on Tue, 09/16/2014 - 11:45

Titre	Interhemispheric Atlantic seesaw response during the last deglaciation
Type de publication	Article de revue
Auteur	Barker, Stephen [1], Diz, Paula [2], Vautravers, Maryline J [3], Pike, Jennifer [4], Knorr, Gregor [5], Hall, Ian R [6], Broecker, Wallace S [7]
Editeur	Nature Publishing Group
Type	Article scientifique dans une revue à comité de lecture
Année	2009
Langue	Anglais
Date	2009/02/26
Numéro	7233
Pagination	1097 - 1102
Volume	457
Titre de la revue	Nature
ISSN	0028-0836
Résumé en anglais	<p>The asynchronous relationship between millennial-scale temperature changes over Greenland and Antarctica during the last glacial period has led to the notion of a bipolar seesaw which acts to redistribute heat depending on the state of meridional overturning circulation within the Atlantic Ocean. Here we present new records from the South Atlantic that show rapid changes during the last deglaciation that were instantaneous (within dating uncertainty) and of opposite sign to those observed in the North Atlantic. Our results demonstrate a direct link between the abrupt changes associated with variations in the Atlantic meridional overturning circulation and the more gradual adjustments characteristic of the Southern Ocean. These results emphasize the importance of the Southern Ocean for the development and transmission of millennial-scale climate variability and highlight its role in deglacial climate change and the associated rise in atmospheric carbon dioxide.</p>
